Education

University of Central Florida *2x Dean's List* **Orlando, FL**
Undergraduate Computer Science - BS, GPA: 3.8 Expected May 2028

Projects

Sprouts of Safety | *Godot, GDScript, GitHub* Oct 2026
- Converted tilemaps into Navmeshes using Godot's NavigationRegion2D, enabling AI agents to execute A* pathfinding.
- Engineered a weighted random algorithm utilizing dictionaries to balance enemy frequencies by Morse token length, successfully optimizing game pacing.
- Implemented a state-switching target system using tag flags for dynamic entity tracking.

Pharaoh's Forces | *Unreal, Blueprints, GitHub* Oct 2026
- Architected a decoupled spawning system separating visual previews from physics obstacle entities.
- Hardened system stability across actor lifecycles using strict IsValid condition checks before executing movement and deletion logic.
- Programmed an automated AI loop fallback, utilizing a timer-bound custom event that randomized lane-spawning on a fixed cooldown to facilitate standalone gameplay testing.

Photo Freak | *Unity, C#, GitHub* Feb 2026 - May 2026
- Architected a finite state machine using enums to handle inputs, interface triggers, and camera state transitions.
- Engineered a raycast capture subsystem that dynamically logs spatial vectors and secondary targets within viewport.
- Developed a mathematical scoring module utilizing vector dot products and screen-space bounds calculations, exposing adjustable AnimationCurves to the Inspector for non-technical balancing.

Blood Moon | *Godot, GDScript, GitHub* Oct 2025
- Engineered a scene transition script to pause the scene tree and instantiate real-time combat phases on collision.
- Configured database stats utilizing custom dictionaries to assign tracking metrics and attributes for player assets.
- Consolidated loose interface scripts into a singular UI manager to index active player health arrays and optimize scene tree architecture.

Campus Involvement

Knight Hacks Mentee Aug 2024 – Dec 2024
- Attended mentorship programs and hackathons to develop skills in game development, scripting, and debugging.
- Participated in team-based events, contributing to mechanics, item systems, and gameplay logic.
- Gained experience with version control, iterative development, and problem-solving in a fast-paced environment.

NSBE Mentee Aug 2024 – May 2025
- Took part in professional workshops, STEM networking events, and regional/national conferences.
- Engaged in community service and outreach initiatives supporting STEM education.
- Fostered connections with peers and industry professionals to explore career paths in technology.

Work Experience

Summer Camp Counselor July 2022 – Aug 2022
Inna's Hall of Fame Performing Arts Conservatory *Cooper City, FL*
- Supervised a group of 15 children, maintaining discipline and ensuring a safe, positive environment.
- Created set and costume design, enabling creative activities for students.
- Facilitated line delivery and performance practice, contributing to smooth production flow.

Technical Skills

Languages: C, C#, GDScript, Java, JavaScript
Developer Tools: Godot, Unity, Unreal, GitHub, Visual Studio Code, Jira
